ISAN 3360 - Assignment 3: Style Your Site (CSS Fundamentals)

- **Assigned:** Wed, Sep 9 (Week 4)
- **Due:** Sun, Sep 20, 11:59 PM (end of Week 5)
- **Points:** 20
- **Builds on:** your Assignment 2 site
- **Submit:** zip your project folder and upload it to Canvas.

Goal: take your plain Assignment 2 page and start styling it using the selectors and box model we covered today. Same HTML, add CSS.

What to build

Add an external stylesheet, `styles.css`, link it from your page, and use Tag, Class, and ID selectors to add basic styles, borders, and spacing to your site.

Tools: use any resources that help you learn (documentation, examples, AI assistants, and so on). The one rule: you must understand and be able to **explain** what you submit, and **disclose** the tools and AI you used. The exams are closed-book, so the assignments are where you build the understanding.

Requirements (this is also your grading checklist)

Done	Item	Pts
[ ]	**Wiring:** `styles.css` is linked correctly via `<link rel="stylesheet">`	3
[ ]	**Tag Selector:** At least one HTML tag (like `h1` or `body`) is styled directly	4
[ ]	**Class Selector:** A `.class` is created in CSS and applied to an element in your HTML	4
[ ]	**ID Selector:** An `#id` is created in CSS and applied to a unique element in your HTML	4
[ ]	**Box Model:** Intentional use of `padding`, `margin`, and a `border` somewhere on the page	4
[ ]	**Submitted:** Uploaded as a `.zip` to Canvas	1
	Total	**20**

Definition of done

Open your page in a browser. The content is the same as Assignment 2, but it has visual styling applied from your external stylesheet. You have successfully used all three selector types (tag, class, and id) and manipulated the box model (padding/margin/border).

What done looks like

Open your page in a browser and right-click -> Inspect. You can see your custom styles being applied. Open `styles.css` and count: at least one rule starting with a tag name, at least one starting with a dot (`.`), and at least one starting with a hash (`#`). You can also spot `padding`, `margin`, and `border` being used to create space around your content.

Starter files (Optional)

Keep working in your own project folder from Assignment 2: same files. Your site grows, it does not restart. A fresh set of starter files is in `assignment-3-starter.zip` on Canvas. **Using this zip is completely optional.** It contains a small worked example of what this assignment is asking for, so you can copy the starter file into your own Assignment 2 folder and edit it from there if you want a fast start. It is also the catch-up plan if your Assignment 2 files are missing or damaged.

Late: -10%/day up to 3 days. All seven assignments count; none is dropped.
